

Guano Removal and Safety Products

Clearing accumulations of nests and guano from well-used roosting and nesting areas is unpleasant work at the best of times. These areas are usually infested with insects, often blood-feeding ones, they are dirty and smelly and it often takes hard physical work to remove all the rubbish. Due to the risk of disease, it is also potentially very dangerous work for the operators involved.

It is therefore essential that all the proper safety and disposal equipment is used and appropriate Personal Protective Equipment worn. In addition to the risks from bird droppings, there might be other hazards to contend with such as having to clear broken glass and hypodermic syringes. These risks need to be assessed prior to commencing work, and the appropriate additional precautions implemented.

Safety Masks and Products

For those who carry out Guano removal work indoors or on a regular basis, it is recommended that you use P3 filtration.

The **Scott Profile 2 Respirator** is an advanced lightweight twin filter half mask, combining comfort and protection. It is a perfectly balanced, user friendly and modern design.

The **P3 Valved Dust Mask** is a fold flat, disposable respirator fitted with an exhalation valve to reduce heat build up and increase comfort.

Disinfectants

Disinfectants should be applied to the surface of accumulated bird droppings prior to starting cleaning and whenever a fresh surface becomes exposed, especially where droppings are dried and disturbance would give off clouds of dust and microorganisms; and then applied again to disinfect the area when the droppings have been removed.

PX Ornikill is a disinfectant containing biguanide (1%) and QAC's (15% w/v), designed to kill the microorganisms responsible for these diseases. PX Ornikill is supplied as a concentrate for diluting (up to 50:1 depending on situation).

Guanaway contains didecyldimethylammonium chloride. As well as being a disinfectant it also acts as a powerful cleaner-degreaser. Guanaway is available in a Ready-to-Use trigger sprayer.
